**ProShares Announces Changes to ETF Lineup**

BETHESDA, Md. – July 25, 2016 – ProShares announced upcoming benchmark changes and liquidations for some of its ETFs.

**Benchmark methodology changes**

S&P Dow Jones Indices is changing the methodology of its GICS sector structure. It is creating a new GICS real estate sector, elevating the sector from an industry group within the GICS financials sector. As a result, the Financial Select Sector Index will drop real estate companies. This change will be implemented after the close of business on September 16, 2016. As a result of this methodology change, the following ETFs will be rebalanced to exclude real estate:

| <u>ProShares ETF</u>                   | <u>Ticker</u> | <u>Benchmark</u>                  |
|--|---------------|-----------------------------------|
| UltraPro Financial Select Sector       | FINU          | S&P Financial Select Sector Index |
| UltraPro Short Financial Select Sector | FINZ          |                                   |

Also as a result of the GICS methodology change, the name of the benchmark tracked by the S&P 500 Ex-Financials ETF (SPXN) will change, although the index constituents and SPXN's portfolio will remain the same:

| <u>ProShares ETF</u>      | <u>Ticker</u> | <u>Current Benchmark Name</u> | <u>New Benchmark Name</u>                   |
|---------------------------|---------------|-------------------------------|---|
| S&P 500 Ex-Financials ETF | SPXN          | S&P 500 Ex-Financials Index   | S&P 500 Ex-Financials and Real Estate Index |

**Benchmark changes**

The benchmark for ProShares Ultra FTSE Europe (UPV) and ProShares UltraShort FTSE Europe (EPV) will change as detailed below. This change will be implemented by September 1, 2016.

| <u>ProShares ETF</u>   | <u>Ticker</u> | <u>Old Benchmark</u>         | <u>New Benchmark</u>                |

**Investing involves risk, including the possible loss of principal.** ProShares ETFs are generally non-diversified and each entails certain risks, which may include risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance. Short positions lose value as security prices increase. Leverage can increase market exposure and magnify investment risk. International investments may also involve risk from unfavorable fluctuations in currency values, differences in generally accepted accounting principles, and from economic or political instability. Narrowly focused investments typically exhibit higher volatility. These risks can increase volatility and decrease performance.
