ProShares UltraShort ETFs seek to return twice the inverse of index performance on a daily basis (before fees and expenses)

- Seek profit when markets decline
- Hedge portfolios against market declines
- Track your investment throughout the day
- No margin account

FUND PERFORMANCE AND INDEX HISTORY

ProShares UltraShort 7-10 Year Treasury seeks a return that is -2x the return of an index (target) **for a single day**, as measured from one NAV calculation to the next. Due to the compounding of daily returns, returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor holdings consistent with their strategies, as frequently as daily. For more on correlation, leverage and other risks, please read the prospectus.

	4Q 2011	Year to Date	1-Year	3-Year	5-Year	Since Inception ¹
ProShares UltraShort 7-10 Year Treasury NAV Total Return	-3.58%	-27.82%	-27.82%	-16.45%	—	-20.11%
ProShares UltraShort 7-10 Year Treasury Market Price Total Return	-3.39%	-27.94%	-27.94%	-16.63%	—	-20.16%
Barclays Capital 7-10 Year U.S. Treasury Index	1.35%	15.60%	15.60%	5.91%	—	8.67%

DAILY PERFORMANCE OF PST vs. INDEX DURING 4Q 2011

The following scatter graph charts the daily NAV-to-NAV results of the fund against its underlying index return on a daily basis.

DAILY RETURN DURING 4Q 2011

The performance represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.776.5125 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial adviser or broker/dealer representative or visit ProShares.com. ProShares are not suitable for all investors. UltraShort ProShares should lose value when their market indexes rise—a result that is opposite from traditional ETFs.

¹Since inception returns are annualized. Market returns are based on the primary market closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date. ²According to the estimated figure listed in the applicable prospectus. ³Expenses with Contractual Waiver through September 30, 2012. ⁴Correlation is a measure of the strength and direction of a linear relationship between two variables. ⁵Beta is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis.

ProShares UltraShort 7-10 Year Treasury

PST

INDEX DESCRIPTION

The Barclays Capital 7-10 Year U.S. Treasury Index includes all publicly issued U.S. Treasury securities that have a remaining maturity of between 7 and 10 years, are non-convertible, are denominated in U.S. dollars, are rated investment grade (at least Baa3 by Moody's Investors Service or BBB- by S&P), are fixed rate, and have more than \$250 million par outstanding. The index is weighted by the relative market value of all securities meeting the index criteria. Excluded from the index are certain special issues, such as flower bonds, targeted investor notes (TINs), U.S. Treasury inflation-protected securities (TIPS), state and local government series bonds (SLGs), and coupon issues that have been stripped from assets already included.

or ask your financial adviser or broker.

⁶The quarterly volatility refers to annualized standard deviation, a statistical measure that captures the variation of an index's returns from their mean and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index's return fluctuates over time.

Investing involves risk, including the possible loss of principal. ProShares are non-diversified and entail certain risks, including risk associated with the use of derivatives (futures contracts, swap agreements and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds' benchmarks, can increase volatility, and may dramatically decrease performance. **There is no guarantee any ProShares ETF will achieve its investment objective.** For more on correlation, leverage and other risks, please read the prospectus. Bond values fall when interest rates rise; bonds with longer maturities tend to fluctuate more in response to interest rate changes.

ProShares are distributed by SEI Investments Distribution Co., which is not affiliated with the fund's advisor. ProShares may invest in equity securities and/or financial instruments (including derivatives) that, in combination, should have similar daily price return characteristics to the fund's benchmark. Derivative contracts are priced to include the underlying index yield and will not generate dividend income. Because ProShares invest in derivatives and other financial instruments, their dividend distributions may not reflect those of their applicable indexes.
