ProShares UltraPro Short ETFs seek to return three times the inverse of index performance on a daily basis (before fees and expenses)

- Seek profit when markets decline
- Hedge portfolios against market declines
- Track your investment throughout the day
- No margin account

FUND PERFORMANCE AND INDEX HISTORY

ProShares UltraPro Short MidCap400 seeks a return that is -3x the return of an index (target) *for a single day*, as measured from one NAV calculation to the next. Due to the compounding of daily returns, returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor their holdings consistent with their strategies, as frequently as daily. For more on correlation, leverage and other risks, please read the prospectus.

	1Q 2012	Year to Date	1-Year	3-Year	5-Year	Since Inception ¹
ProShares UltraPro Short MidCap400 NAV Total Return	-33.41%	-33.41%	-42.35%	—	—	-59.37%
ProShares UltraPro Short MidCap400 Market Price Total Return	-33.47%	-33.47%	-42.30%	—	—	-59.34%
S&P MidCap 400 Index	13.50%	13.50%	1.98%	—	—	19.47%

DAILY PERFORMANCE OF SMDD vs. INDEX DURING 1Q 2012

The following scatter graph charts the daily NAV-to-NAV results of the fund against its underlying index return on a daily basis.

DAILY RETURN DURING 1Q 2012

The performance represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.776.5125 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial adviser or broker/dealer representative or visit ProShares.com. ProShares are not suitable for all investors. UltraPro Short ProShares should lose value when their market indexes rise—a result that is opposite from traditional ETFs.

¹Since inception returns are annualized. Market returns are based on the primary market closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date. ²According to the estimated figure listed in the applicable prospectus. ³Expenses with Contractual Waiver through September 30, 2012. ⁴Correlation is a measure of the strength and direction of a linear relationship between two variables. ⁵Beta is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis.

ProShares UltraPro Short MidCap400

INDEX DESCRIPTION

The S&P MidCap 400 Index is a widely used measure of mid-size company U.S. stock market performance. Companies are selected for inclusion in the index by Standard & Poor's based on adequate liquidity, appropriate market capitalization, financial viability and public float.

Basic Materials	4.14%

⁶The quarterly volatility refers to annualized standard deviation, a statistical measure that captures the variation of an index's returns from their mean and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index's return fluctuates over time.

Investing involves risk, including the possible loss of principal. ProShares are non-diversified and entail certain risks, including risk associated with the use of derivatives (futures contracts, swap agreements and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds' benchmarks, can increase volatility, and may dramatically decrease performance. Investments in smaller companies typically exhibit higher volatility. **There is no guarantee any ProShares ETF will achieve its investment objective.** For more on correlation, leverage and other risks, please read the prospectus.

ProShares are distributed by SEI Investments Distribution Co., which is not affiliated with the fund's advisor. ProShares may invest in equity securities and/or financial instruments (including derivatives) that, in combination, should have similar daily price return characteristics to the fund's benchmark. Derivative contracts are priced to include the underlying index yield and will not generate dividend income. Because ProShares invest in derivatives and other financial instruments, their dividend distributions may not reflect those of their applicable indexes.
