Short or Ultra ProShares ETFs seek returns that are 3x, 2x, -1x, -2x or -3x the return of an index or other benchmark (target) *for a single day*, as measured from one NAV calculation to the next. Due to the compounding of daily returns, Short or Ultra ProShares' returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor their holdings consistent with their strategies, as frequently as daily. For more on correlation, leverage and other risks, please read the prospectus. Investing involves risk, including the possible loss of principal. ProShares are non-diversified and entail certain risks, including risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds' benchmarks, can increase volatility, and may dramatically decrease performance. There is no guarantee any ProShares ETF will achieve its investment objective. ProShares are not suitable for all investors.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial adviser or broker/dealer representative or by visiting [proshares.com](http://proshares.com). ProShares are distributed by SEI Investments Distribution Co., which is not affiliated with the funds' advisor.
