How Did the Fund Perform Last Year?

UltraPro QQQ[®] (the "Fund") seeks daily investment results, before fees and expenses, that correspond to three times (3x) the daily performance of the Nasdaq-100[®] Index (the "Index"). The Fund invests in financial instruments that the Advisor believes, in combination, should produce daily returns consistent with the Fund's investment objective. For the year ended May 31, 2024, the Fund had a total return of 82.84% and an average daily statistical correlation of over 0.99 to three times that of the return of the Index. For the same period, the Index had a total return of 31.12% and a volatility of 16.02%. The index performance was driven by factors such as enthusiasm for AI and strength in the "Magnificent Seven" companies. Primary factors affecting Fund performance include the total return of the securities and derivatives held by the Fund, the performance of the reference assets to which any derivatives are linked, financing rates paid or earned, the types of derivative contracts used and their correlation to the Fund's Index, expenses, transaction costs, the volatility of the Fund's Index (and its impact on compounding), and other miscellaneous factors.
