Periods greater than one year are annualized.

Please note: *This ETF may pay a monthly distribution, which is reflected in the total return performance shown above, unlike spot crypto products. Some third-party websites may display performance based only on price return. The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be more or less than the original cost. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Market price returns are based upon the midpoint of the bid/ask spread at 4 p.m. ET (when NAV is normally determined for most funds) and do not represent the returns you would receive if you traded shares at other times. Your brokerage commissions will reduce returns. Current performance may be lower or higher than the performance quoted. This ETF is actively managed. The costs associated with rolling (buying and selling) futures and the impact of margin requirements, collateral requirements and other limits may have a negative impact on performance and prevent the Fund from achieving its objective. The price and performance of bitcoin futures should be expected to differ from the current "spot" prices of bitcoin (the prices of bitcoin that can be purchased immediately). These differences could be significant.

This ETF is non-diversified and is subject to risks associated with the use of futures contracts, leverage, and market price variance, all of which can increase volatility and decrease performance.

**This ETF invests in bitcoin futures contracts and does not invest directly in bitcoin.** Bitcoin is a relatively new asset class, and the market for bitcoin is subject to rapid changes and uncertainty. Bitcoin is subject to unique and substantial risks, including significant price volatility and lack of liquidity, including as a result of changes in the supply of and demand for bitcoin. Bitcoin is largely unregulated and may be more susceptible to fraud and manipulation than more regulated investments. The value of an investment in the ETF could decline significantly and without warning, including to zero.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Your brokerage commissions will reduce returns.
