The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be more or less than the original cost. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Market price returns are based upon the midpoint of the bid/ask spread at 4 p.m. ET (when NAV is normally determined for most funds) and do not represent the returns you would receive if you traded shares at other times. Your brokerage commissions will reduce returns. Current performance may be lower or higher than the performance quoted.

Investing involves risk, including the possible loss of principal. There is no guarantee that ProShares Bitcoin Strategy ETF (BITO) will achieve its investment objective. This ETF may not be suitable for all investors.

Bitcoin and bitcoin futures are a relatively new asset class, and the market for bitcoin is subject to rapid changes and uncertainty. Bitcoin and bitcoin futures are subject to unique and substantial risks, including significant price volatility and lack of liquidity. The value of an investment in the ETF could decline significantly and without warning, including to zero.

Bitcoin and bitcoin futures are subject to rapid price swings, including as a result of actions and statements by influencers and the media, changes in the supply of and demand for bitcoin and bitcoin futures contracts, and other factors.

Bitcoin is largely unregulated and bitcoin investments may be more susceptible to fraud and manipulation than more regulated investments. This ETF is actively managed. The price and performance of bitcoin futures should be expected to differ from the current "spot" prices of bitcoin. These differences could be significant. Bitcoin futures are subject to margin requirements, collateral requirements and other limits that may prevent the ETF from achieving its objective. Margin requirements for futures and costs associated with rolling (buying and selling) futures may have a negative impact on the fund's performance and its ability to achieve its investment objective.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Your brokerage commissions will reduce returns.
