Please note: *This ETF may pay a monthly distribution, which is reflected in the total return performance shown above, unlike spot crypto products. Some third-party websites may display performance based only on price return. The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be more or less than the original cost. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Market price returns are based upon the midpoint of the bid/ask spread at 4 p.m. ET (when NAV is normally determined for most funds) and do not represent the returns you would receive if you traded shares at other times. Your brokerage commissions will reduce returns. Current performance may be lower or higher than the performance quoted. For standardized returns and performance data current to the most recent month end, call 866.776.5125 or visit ProShares.com*

*EETH is the first U.S. exchange-traded fund that seeks to correspond to the performance of ether.

This ETF invests in ether futures contracts and does not invest directly in ether. Ether is a relatively new asset class, and the market for ether is subject to rapid changes and uncertainty. Ether is subject to unique and substantial risks, such as rapid price swings and lack of liquidity, including as a result of changes in the supply of and demand for ether. Ether is largely unregulated and may be more susceptible to fraud and manipulation than more regulated investments. The value of an investment in the ETF could decline significantly and without warning, including to zero.

This ETF is actively managed. The costs associated with rolling (buying and selling) futures and the impact of margin requirements, collateral requirements and other limits may have a negative impact on performance and prevent the Fund from achieving its objective. The price and performance of ether futures should be expected to differ from the current "spot" prices ether (the prices of ether that can be purchased immediately). These differences could be significant.

This ETF is non-diversified and is subject to risks associated with the use of futures contracts, leverage, and market price variance, all of which can increase volatility and decrease performance.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Your brokerage commissions will reduce returns.
