BCBCLI (Index)	-0.45%	-0.45%	-8.42%	-2.05%	24.50%	—	8.37%

Periods greater than one year are annualized.

Performance quoted represents past performance and does not guarantee future results. Investment return and principal value will fluctuate, so an investor's shares may be worth more or less than the original cost when sold. Market price returns are based on the bid/ask midpoint at 4:00 p.m. ET (when NAV is normally determined) and may differ from your returns if you traded shares at other times. Index performance does not reflect fees or expenses. Indexes are unmanaged and cannot be invested in directly. Current performance may be higher or lower than performance quoted. For performance data current to the most recent month-end, visit [ProShares.com](https://www.proshares.com).

ETF HOLDINGS (%)³

Description	Exposure Value	Shares/Contracts
WTI CRUDE 20/MAY/2025 CLM5	22,916,850	323
WTI CRUDE 20/NOV/2025 CLZ5	22,518,280	334
WTI CRUDE 19/MAY/2026 CLM6	22,441,210	341
Net Other Assets (Liabilities)	—	67,845,621

*Schedule K-1 is the tax reporting form issued by commodities partnerships; the form typically presents additional complexities, including tax filing delays, versus the 1099 Form issued by an ETF registered under the Investment Company Act of 1940. ¹30-Day SEC Yield is a standard yield calculation developed by the Securities and Exchange Commission (SEC) that facilitates fairer comparisons of funds. The figure reflects dividends and interest earned by the securities held by the fund during the most recent 30-day period, net of fund's expenses. ²12-Month Distribution Rate represents the sum of the fund's distributions for the last 12 months, expressed as a percentage of the NAV at the announcement of the most recent distribution. ³Holdings are subject to change.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This material must be preceded or accompanied by the current fund prospectus. Read it carefully before investing.

Investing involves risk, including the possible loss of principal. ProShares ETFs are generally non-diversified and each entails certain risks, including risks associated with the use of derivatives (swap agreements, futures contracts and similar instruments), leverage and market price variance, all of which can increase volatility and decrease performance. Investing in the energy industry is prone to significant volatility resulting from dramatic changes in commodities prices. There are additional risks related to large institutional purchases or sales, changes in exchange rates, government regulation, world events, economic and political conditions in the countries where energy companies are located or do business, and risks for environmental damage claims. Certain derivative instruments will subject the fund to counterparty risk and credit risk, which could result in significant losses for the fund. Please see their summary and full prospectuses for a more complete description of risks. **There is no guarantee any ProShares ETF will achieve its investment objective.**

This ETF seeks to provide total return through actively managed exposure to the West Texas Intermediate ("WTI") crude oil futures markets. The fund does not invest in nor seek exposure to the current "spot" or cash price of physical crude oil. The fund's strategy seeks to outperform certain index-based strategies by actively managing the rolling of WTI crude oil futures contracts to (a) mitigate the negative impact of contango, or (b) benefit from the backwardation present in the WTI crude oil futures markets, but there can be no guarantee that it will be successful in doing so. The fund seeks to remain fully exposed to WTI crude oil futures, even during adverse market conditions. As such, the fund should be expected to decrease in value when WTI crude oil futures markets deteriorate. During adverse conditions, the fund seeks to lose less than index-based strategies that formulaically roll contracts. However, there can be no assurance that the fund will outperform index-based or other actively managed strategies that invest in WTI crude oil futures markets. Active management may also increase transaction costs. Investors should actively manage and monitor their investments. This ETF may not be suitable for all investors.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage commissions will reduce returns. ProShares are distributed by SEI Investments Distribution Co., which is not affiliated with the funds advisor.
