Why PEX ?

- Invests exclusively in a globally diversified portfolio of listed private equity companies whose primary business is direct investments in private enterprises.
- Provides ETF access to listed private equity for investors who either have had difficulty accessing it in other forms or who want more liquidity than is typical of private equity limited partnerships.

Fund performance and index history³

	4Q 2024	Year to Date	1-Year	5-Year	10-Year	Fund Inception
ProShares Global Listed Private Equity ETF NAV Total Return	1.19%	12.46%	12.46%	5.44%	6.54%	6.76%

Periods greater than one year are annualized.

Growth of \$10,000 since inception⁴

See reverse for additional information about the fund.

¹Expenses with Contractual Waiver through September 30, 2025. Without the fee waiver performance would likely be lower.

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.776.5125 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial professional or visit ProShares.com. ProShares are not suitable for all investors.

²Definitions of terms: "Investment advisory fees" are paid to the advisor to manage the fund. "Other expenses" are based on estimated amounts for the current fiscal year. "Acquired fund fees and expenses" are incurred indirectly through the fund's ownership of shares in other investment companies, such as business development companies (BDCs). They are not direct costs paid by shareholders or used to calculate net asset value ("NAV"). "Gross expense ratio" is the sum of all applicable fees and expenses. "Fee waiver/reimbursement" is the amount the advisor has agreed to waive through September 30, 2025. "Net expense ratio" is the total annual fees and expenses after waivers and reimbursements. "Average market capitalization (cap)" reflects the value of index component companies. "30-day SEC yield" is a standard yield calculation developed by the Securities and Exchange Commission that allows investors to more fairly compare funds. "30-day SEC yield (unsubsidized)" is what the 30-day SEC yield would have been without the contractual fee waiver. "Returns are based on the composite closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date. ³NAV total returns for the fund are used to calculate Growth of \$10,000. ©2025 PSA 2020-2304

Index description

The LPX Direct Listed Private Equity Index is designed to measure the performance of the most actively traded listed private equity companies that mainly pursue a direct private equity investment strategy.

⁴Definitions of terms: "Volatility" refers to annualized standard deviation, a statistical measure that captures the variations from the mean of an index's returns and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index's returns fluctuate over time. "Quarterly Sharpe ratio" characterizes how well the return of an asset compensates the investor for the risk taken. ⁵Holdings are subject to change. ⁶Sum of weightings may not equal 100% due to rounding.

Investing involves risk, including the possible loss of principal. ProShares ETFs are generally non-diversified and each entails certain risks, including imperfect benchmark correlation and market price variance, that can increase volatility and decrease performance. Investments in smaller companies typically exhibit higher volatility. International investments may also involve risk from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles, and from economic or political instability. There are risks in investing in listed private equity companies (LPEs), which encompass business development companies (BDCs) and other financial institutions or vehicles whose principal business is to invest in and provide financing to privately held companies. Little public information may exist for private or thinly traded companies, and investors may not be able to make fully informed investment decisions. Private equity securities carry risks related to unclear ownership, market access and market opacity. BDCs are subject to the Investment Company Act of 1940 but are exempt from many of its regulatory constraints. The fund is subject to risks faced by BDCs to the same extent as its index is so concentrated. A significant portion of the index is composed of BDCs or other investment companies. The fund may not acquire greater than 3% of the total outstanding shares of such companies. As a result, the fund's ability to purchase certain securities in the proportions represented in the index could be inhibited. The fund may be required to use sampling techniques in these circumstances, which could increase correlation risk. For more on the fund, LPEs, BDCs, correlation and other risks, please read the prospectus. **There is no guarantee any ProShares ETF will achieve its investment objective.**
