## OProShares

FACT SHEET As of 12/31/23

## PROSHARES ULTRA MSCI BRAZIL CAPPED

Fund objective

ProShares Ultra MSCI Brazil Capped seeks daily investment results, before fees and expenses, that correspond to two times ( $2 x$ ) the daily performance of the MSCI Brazil 25/50 Index ${ }^{\oplus}$.

## Fund details

| Inception Date | $4 / 27 / 10$ |
| :--- | ---: |
| Trading Symbol | UBR |
| Intraday Symbol | UBR.IV |
| Bloomberg Index | MXBR2550 |
| Symbol |  |

| Exchange | NYSE Arca |
| Net Assets | $\$ 5.50$ million |
| Gross Expense | $2.65 \%$ |
| Ratio |  |
| Net Expense | $0.95 \%$ |
| Ratio |  |

## Uses for magnified exposure

Some uses for magnified exposure:

- Seeking magnified gains (will also magnify losses)
- Getting a target level of exposure for less cash
- Overweighting a market segment without additional cash

## Fund performance and benchmark history ${ }^{2}$

This ProShares ETF seeks daily investment results that correspond, before fees and expenses, to $2 x$ the daily performance of its underlying benchmark (the "Daily Target"). While the Fund has a daily investment objective, you may hold Fund shares for longer than one day if you believe it is consistent with your goals and risk tolerance. For any holding period other than a day, your return may be higher or lower than the Daily Target. These differences may be significant. Smaller index gains/losses and higher index volatility contribute to returns worse than the Daily Target. Larger index gains/losses and lower index volatility contribute to returns better than the Daily Target. The more extreme these factors are, the more they occur together, and the longer your holding period while these factors apply, the more your return will tend to deviate. Investors should consider periodically monitoring their geared fund investments in light of their goals and risk tolerance.

|  | 4Q 2023 | Year to Date | 1-Year | 5-Year | 10-Year | Fund Inception |

${ }^{1}$ Expenses with Contractual Waiver through September 30, 2024 Without the fee waiver performance would likely be lower. ${ }^{2}$ Market returns are based on the composite closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date. ${ }^{3}$ Because the value of the index is not computed as of the close of the U.S. securities markets due to differences in trading hours between U.S. and foreign markets, correlation to the index will be measured by comparing the daily change in the fund's net asset value per share to the performance of one or more U.S. exchange-traded securities or instruments (benchmark) that reflect the values of the securities underlying the index as of the close of the U.S. securities markets. "Correlation" is a measure of the strength and direction of a linear relationship between two variables. "Beta" is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis. ${ }^{6}$ "Volatility" refers to annualized standard deviation, a statistical measure that captures the variations from the mean of an index's returns and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index's returns fluctuate over time. ''Sum of weightings may not equal $100 \%$ due to rounding.
Investing involves risk, including the possible loss of principal. ProShares are generally non-diversified and entail certain risks, including risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds' benchmarks, can increase volatility, and may dramatically decrease performance. International investments may also involve risk from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, and from economic or political instability. Single-country funds typically exhibit higher volatility. In emerging markets, all these risks are heightened, and lower trading volumes may occur. Please see the summary and full prospectuses for a more complete description of risks. There is no guarantee any ProShares ETF will achieve its investment objective.
ProShares may invest in equity securities and/or financial instruments (including derivatives) that, in combination, should have similar daily price return characteristics to the fund's benchmark. Derivative contracts are priced to include the underlying index yield and will not generate dividend income. Because ProShares invest in derivatives and other financial instruments, their dividend distributions may not reflect those of their applicable indexes.
"MSCI" is a service mark of MSCI and has been licensed for use by ProShares.
