ProShares UltraShort Bloomberg Crude Oil seeks daily investment results, before fees and expenses, that correspond to two times the inverse (-2x) of the daily performance of the Bloomberg WTI Crude Oil Subindex (SM).

The fund's benchmark is an index of crude oil futures contracts. It is not intended to track the performance of the spot price of WTI crude oil. It can be expected to perform very differently than the spot price of WTI crude oil.

Important Information: Recent global developments affecting crude oil markets and crude oil futures contracts have dramatically increased volatility and even resulted in a negative price for the May 2020 WTI crude oil futures contract. As a result, investors in SCO may be subject to significant volatility and unexpected losses. In response to these conditions, SCO has modified certain of its investment strategies and the performance of this oil fund may differ from -2x of the daily performance of its benchmark. Investors should read the fund's latest prospectus and Form 8-K filings on ProShares.com to better understand the fund's objectives, strategies and risks. The fund does not track the spot price of WTI crude oil.

Fund performance and index history
ProShares UltraShort Bloomberg Crude Oil seeks a return that is -2x the return of its index (target) for a single day, as measured from one NAV calculation to the next. Due to the compounding of daily returns, holding periods of greater than one day can result in returns that are significantly different than the target return and ProShares' returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor their holdings as frequently as daily. Investors should consult the prospectus for further details on the calculation of the returns and the risks associated with investing in this product.

Daily return during 2Q 2020
ProShares UltraShort Bloomberg Crude Oil vs. Bloomberg WTI Crude Oil Subindex

This material must be accompanied or preceded by a ProShares Trust II prospectus.

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.770.5125 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

ProShares are not suitable for all investors. Short ProShares should lose value when their market indexes rise—a result that is opposite from traditional ETFs.

Futures trading involves a substantial risk of loss.

1. Expense ratio does not include brokerage commissions and related fees paid by the fund.

2. Returns are based on the primary market closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date.

3. "Correlation" is a measure of the strength and direction of a linear relationship between two variables.

4. "Beta" is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis.
Index description

The Bloomberg WTI Crude Oil Subindex, a subindex of the Bloomberg Commodity Index, is intended to reflect the performance of crude oil as measured by the price of futures contracts of West Texas Intermediate sweet, light crude oil. The performance of the crude oil futures market is normally very different than the performance of the physical crude oil market.

It is a "rolling index," which means that it does not take physical possession of any commodities. The roll occurs over a period of five business days in certain months, according to the predetermined schedule, generally beginning on the sixth business day of the month and ending on the tenth business day. Each day, approximately 20% of each rolling futures position that is included in the month's roll is rolled, increasing from 0% to 20%, 40%, 60%, 80% and finally 100%.

The Bloomberg WTI Crude Oil Subindex will reflect the performance of its underlying crude oil futures contracts, including the impact of rolling, without regard to income earned on cash positions.

Index characteristics

| Number of Constituents | 1 |
| Volatility | 116.34% |

For more information, visit ProShares.com or ask your financial advisor or broker.

Volatility refers to annualized standard deviation, a statistical measure that captures the variations from the mean of an index's returns and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index's returns fluctuate over time.

This ETF does not invest directly in commodities. This ETF invests substantially in financial instruments linked to the performance of commodities, such as swap agreements, forward contracts, and futures and options contracts, which may be subject to greater volatility than investments in traditional securities. Certain of these financial instruments will also subject the fund to counterparty risk and credit risk, which could result in significant losses for the fund. There are additional risks due to large institutional purchases or sales, and natural and technological factors such as severe weather, unusual climate change, and development and depletions of alternative resources.

Investing in this ETF involves substantial risk, including loss of principal. ProShares are generally non-diversified and entail certain risks, including risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds' benchmarks, can increase volatility, and may dramatically decrease performance. Narrowly focused investments typically exhibit higher volatility. Please see the summary and full prospectuses for a more complete description of risks. There is no guarantee any ProShares ETF will achieve its investment objective.

ProShares Trust II is a commodity pool as defined in the Commodity Exchange Act and the applicable regulations of the CFTC. ProShare Capital Management LLC is the Trust Sponsor, commodity pool operator (CPO) and commodity trading advisor. The Sponsor is registered as a CPO and commodity trading advisor with the CFTC, and is a member of the NFA. Neither this ETF nor ProShares Trust II is an investment company regulated under the Investment Company Act of 1940 and neither is afforded its protections.

Investing in these ETFs involves significant risks. Investors could lose all or substantially all of their investment.

ProShares Trust II (the issuer) has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents the issuer has filed with the SEC for more complete information about the issuer and this offering. You may get these documents for free by visiting EDGAR on the SEC website at sec.gov. Alternatively, the issuer will arrange to send you the prospectus if you request it by calling 866.776.5125, or visit ProShares.com. This fund generates a K-1 tax form.

Neither this ETF nor ProShares Trust II is an investment company regulated under the Investment Company Act of 1940 and neither is afforded its protections.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage commissions will reduce returns.
