ProShares Short FTSE China 50 seeks daily investment results, before fees and expenses, that correspond to the inverse (-1x) of the daily performance of the FTSE China 50 Index.

Fund details

- Inception Date: 3/16/10
- Trading Symbol: YXI
- Intraday Symbol: YXI.IV
- Bloomberg Index Symbol: XIN0I
- CUSIP: 74347X658
- Exchange: NYSE Arca
- Net Assets: $2.81 million
- Gross Expense Ratio: 1.98%
- Net Expense Ratio: 0.95%

Uses for inverse exposure

- Helping to hedge against declines
- Seeking to profit from declines
- Underweighting exposure to a market segment

Fund performance and benchmark history

ProShares Short FTSE China 50 seeks a return that is -1x the return of its index (target) for a single day, as measured from one NAV calculation to the next. Due to the compounding of daily returns, holding periods of greater than one day can result in returns that are significantly different than the target return and ProShares’ returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor their holdings as frequently as daily. Investors should consult the prospectus for further details on the calculation of the returns and the risks associated with investing in this product.

Periods greater than one year are annualized.

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor’s shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.776.5725 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial professional or visit ProShares.com. ProShares are not suitable for all investors. Short ProShares should lose value when their market indexes rise—a result that is opposite from traditional ETFs.

“Expenses with Contractual Waiver through September 30, 2021. Without the fee waiver performance would likely be lower.”

“Returns are based on the composite closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date.

“Because the value of the index is not computed as of the close of the U.S. securities markets due to differences in trading hours between U.S. and foreign markets, correlation to the index will be measured by comparing the daily change in the fund’s net asset value per share to the performance of one or more U.S. exchange-traded securities or instruments (benchmarks) that reflect the values of the securities underlying the index as of the close of the U.S. securities markets. “Correlation” is a measure of the strength and direction of a linear relationship between two variables. “Beta” is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis.©2021 PSA 2020-2440

The scatter graph charts the daily NAV-to-NAV results of the fund against its equivalent benchmark return on a daily basis.
The FTSE China 50 Index consists of 50 of the largest and most liquid Chinese stocks listed and traded on the Stock Exchange of Hong Kong.

"Volatility" refers to annualized standard deviation, a statistical measure that captures the variations from the mean of an index’s returns and that is often used to quantify the risk of the index over a specific time period. The higher the volatility, the more an index’s returns fluctuate over time. Sum of weightings may not equal 100% due to rounding.

**Investing involves risk, including the possible loss of principal.** ProShares are generally non-diversified and entail certain risks, including risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance. These risks may pose risks different from, or greater than, those associated with a direct investment in the securities underlying the funds’ benchmarks, can increase volatility, and may dramatically decrease performance. International investments may also involve risk from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, and from economic or political instability. Single-country funds typically exhibit higher volatility. In emerging markets, all these risks are heightened, and lower trading volumes may occur. Please see the summary and full prospectuses for a more complete description of risks. There is no guarantee any ProShares ETF will achieve its investment objective.

ProShares may invest in equity securities and/or financial instruments (including derivatives) that, in combination, should have similar daily price return characteristics to the fund’s benchmark. Derivative contracts are priced to include the underlying index yield and will not generate dividend income. Because ProShares invest in derivatives and other financial instruments, their dividend distributions may not reflect those of their applicable indexes.
